Perry reported on validation of UWSR/WST data in PeopleSoft, he’s not sure that the frequency count is correct. However, the data is strong enough that a generic message in the registration appointment would be appropriate.

An indicator of WST/UWSR satisfaction can be placed on the MyCSUEB page, not on the CAAR.

Further review of WST registration and payment through PeopleSoft led to a decision not to implement. Testing will send a registration list the day after the sign-up deadline for uploading into PeopleSoft using indicator 19.

Next meeting: June 2, 2014
