Download VMware Horizon Client for Windows [Bay Cloud] Version 4.20 or Higher [Get the latest version]

1) Log in to the Windows system as a user with administrator privileges.
2) Download the installer file. Launch a web browser to the following URL: view.csueastbay.edu OR For 32-bit Windows:
   https://my.vmware.com/web/vmware/details?downloadGroup=CART16Q3_WIN32_420&productId=578&rPId=12828

   For 64-bit Windows:
   https://my.vmware.com/web/vmware/details?downloadGroup=CART16Q3_WIN64_420&productId=578&rPId=12828

3) To start the Horizon Client installation program, double-click the installer file (ex. VMware-Horizon-Client-x86-4.2.0-4336726.exe) Follow the prompts to install the components you want (Default settings are all you need).
   Important- **DO NOT SELECT IPv6** we are not using this.
   The VMware Horizon Client service is installed on the Windows client computer. Start Horizon Client and verify you can log in to the correct virtual desktop. Must use valid NetID credentials for login.
