

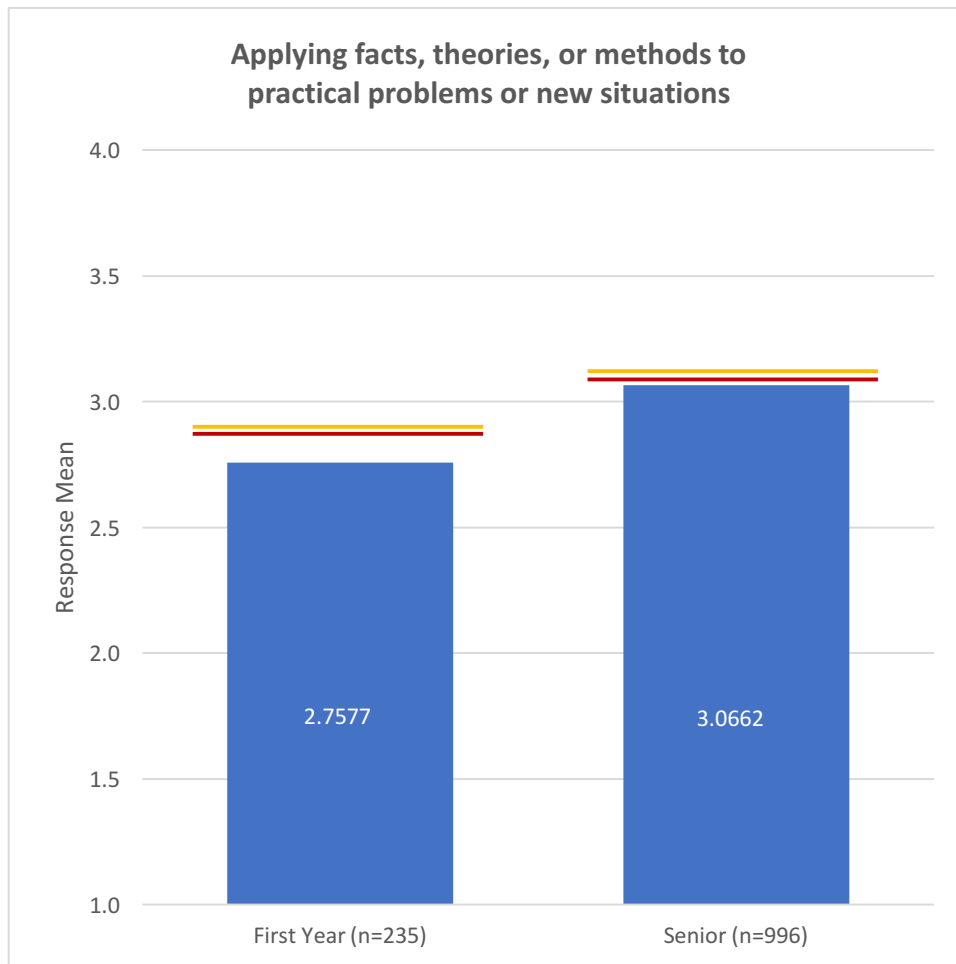

CHART 1: NSSE Question 4b

During the current school year, how much has your coursework emphasized the following?

	Mean	Effect Size		Mean	Effect Size
CSUEB First Year	2.7577		CSUEB Senior	3.0662	
Far West First Year	2.8715	-0.1452 ▽	Far West Senior	3.0833	-0.0214
Carnegie First Year	2.8858	-0.1607 ▽	Carnegie Senior	3.0910	-0.0314

Response Scale

- 1 = Never
- 2 = Sometimes
- 3 = Often
- 4 = Very Often

▽ Your students' average was significantly lower ($p < .05$) with an effect size less than .3 in magnitude.

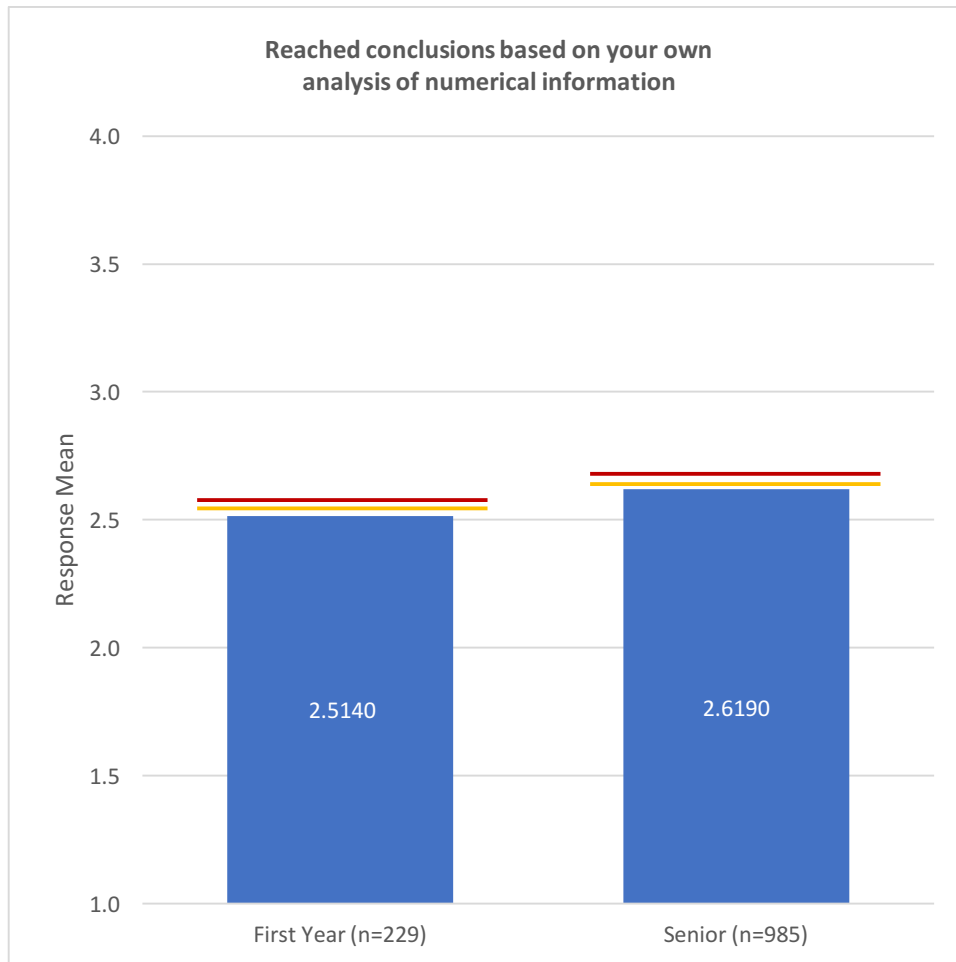

Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (* $p < .05$, ** $p < .01$, *** $p < .001$). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes to judge the practical meaning of differences.

Unless otherwise noted, statistical comparisons are two-tailed independent t-tests.

Effect size: Effect size indicates practical significance. An effect size of .2 is often considered small, .5 moderate, and .8 large. A positive effect size indicates that your institution's mean was greater than that of the comparison group. A negative effect size indicates your institution lags behind the comparison group.

CHART 2: NSSE Question 6a

During the current school year, about how often have you done the following?

	Mean	Effect Size		Mean	Effect Size
CSUEB First Years	2.5139		CSUEB Seniors	2.6189	
Far West First Years	2.5429	-0.0334	Far West Seniors	2.6561	-0.0408
Carnegie First Years	2.5423	-0.0322	Carnegie Seniors	2.6254	-0.0070

Response Scale

- 1 = Never
- 2 = Sometimes
- 3 = Often
- 4 = Very Often

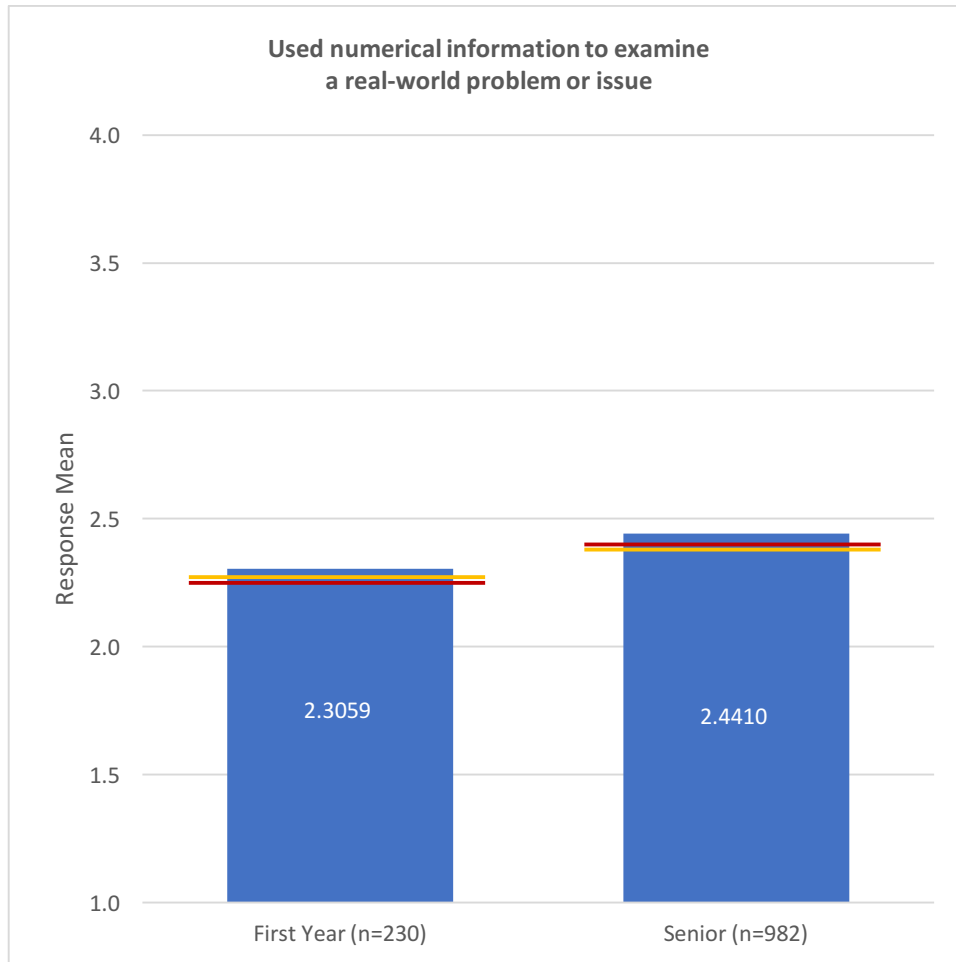

Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (* $p < .05$, ** $p < .01$, *** $p < .001$). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes to judge the practical meaning of differences.

Unless otherwise noted, statistical comparisons are two-tailed independent t-tests.

Effect size: Effect size indicates practical significance. An effect size of .2 is often considered small, .5 moderate, and .8 large. A positive effect size indicates that your institution’s mean was greater than that of the comparison group. A negative effect size indicates your institution lags behind the comparison group.

CHART 5: NSSE Question 17c

How much has your experience at this institution contributed to your knowledge, skills, and personal development in the following areas?

	Mean	Effect Size		Mean	Effect Size
CSUEB First Years	3.0572		CSUEB Seniors	3.2384	
Far West First Years	3.0524	0.0059	Far West Seniors	3.2627	-0.0304
Carnegie First Years	3.0680	-0.0133	Carnegie Seniors	3.2873	-0.0620

Response Scale

- 1 = Never
- 2 = Sometimes
- 3 = Often
- 4 = Very Often

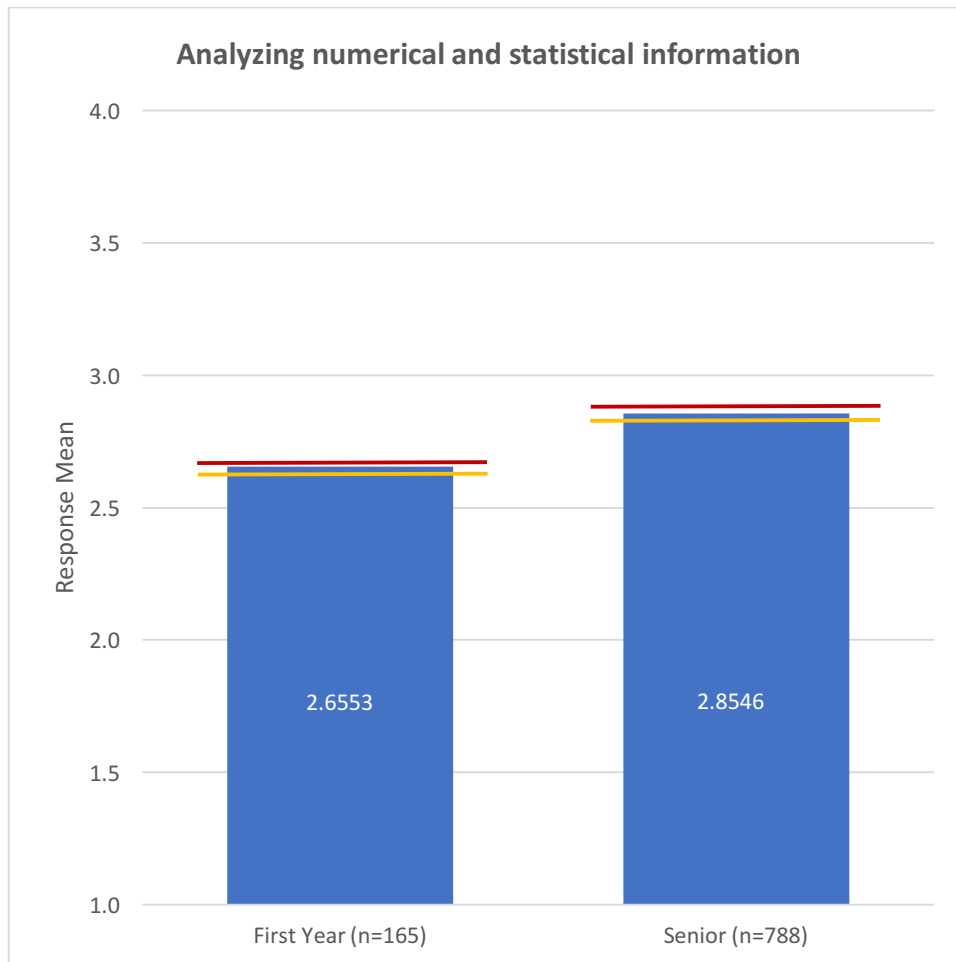

Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (*p < .05, **p < .01, ***p < .001). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important.
