CLINIC INFECTION CONTROL

1. Disinfect table surfaces, chair backs, and door knobs after each therapy/diagnostic session.

2. All devices used for cleaning in the clinic should be thrown away promptly.

3. STAY HOME IF YOU ARE CONTAGIOUS.

4. During any therapeutic oral motor exercises or stimulation/phonetic placement activities, gloves should be worn.

5. Sanitize hands before and after assisting clients with Kleenex tissue use (e.g., runny nose)

6. Diaper changing is restricted to restrooms.

7. Report any client or clinician related injuries to department administrators, particularly any involving direct contact with body fluids or blood.

8. Report the need for replacement hand sanitizer, disinfectant wipes, and/or tissues to the department/clinic administrator.

9. Equipment used in the clinic should be disinfected as outlined by best practices and standard clinical operating procedures.
