COMMUNITY AGREEMENTS

● Push yourself to participate
● Focus on your own experience
● Share headlines, not details
● Ask others before giving them feedback
● Step forward, step back
● Assume positive intent from others
● Take responsibility for your needs
INTRODUCTIONS

Share your name, year @ CSUEB, major and something you’re looking forward to about this semester
INTENTIONS FOR TODAY’S GROUP:

- Practice Body Scan Meditation
- Understanding My Signs of Anxiety
- Cognitive Distortions
- Cycle of Anxiety
- Thought Cloud Meditation

“Did you set your intentions today?”
My Anxiety Meter

1. Alert and awake, concentrating well
2. Mildly anxious and distressed
3. Moderately anxious and distressed
4. Quite anxious and distressed
5. Extremely anxious and distressed
BODY SCAN MEDITATION
Physically, the body’s stress response (“fight-flight-freeze”) is activated. This survival system involves the release of powerful stress hormones, and can allow us to run faster and longer, become motionless, or fight harder to stay alive in an emergency.

Intellectually, clear and rational thinking is impaired as our “primitive” mind is triggered; this is like a bodyguard trying to keep us away from harm. Our bodyguard operates automatically, so it works fast, but doesn’t take the time to look at all the facts.

Behaviorally, we try to get away from danger immediately and avoid it in the future. Sometimes this works well. Yet, often we can’t avoid the trigger, there’s not actually danger (“false alarm”), or avoidance leads to loss of freedom and joy.

Emotionally, we begin to experience a sense of threat or danger. Feeling tense, overwhelmed, nervous, and restless are just a few common responses.
I notice physical changes like: __________________________________________________________
muscle tension, rapid heartbeat, rapid breathing, shakiness, dizziness, lightheadedness, stomach ache, chest pressure, feeling on edge, fatigue, difficulty focusing, sweating, restlessness, headaches...

My actions and behaviors change like: __________________________________________________
avoiding friends/school/work, withdrawing from others, irritability, fidgeting, picking at nails/skin/hair, alcohol/substances, avoiding people, eating ...

I feel affected by thoughts like: __________________________________________________________
“I’m going to fail,” “I’m losing it,” “They probably all think I’m ___,” ...

Emotionally, I start feeling _________________________________________________________________
overwhelmed, frustrated, sad, annoyed, frantic, panicked, worried, afraid, uneasy, numb, scattered, doomed, restless...
Common Cognitive Distortions

Which cognitive distortions are impacting your anxiety the most?

- **Catastrophizing** ("The snowball effect"): Imagining what has happened, or will happen, will be so awful you’ll be completely unable to handle it. Expecting worst-case scenarios.

  Example: “I bet I’ll mess up this job interview just like the last one. I’ll never get a good job, and I’ll end up all alone and living on the street!”

- **Fortune Telling**: A pattern of consistently making negative predictions.

  Example: *Even though I studies hard, I know I’ll fail.*

- **Mind reading**: A pattern of assuming you know exactly what other people are thinking. It involves consistently predicting the worst, without strong evidence it’s true.

  Example: “Everyone probably thinks I’m a loser after that presentation.”

- **Emotional Reasoning**: Allowing your mood to bias your interpretation.

  Example: “I feel nervous, so it must be unsafe in this elevator.”

- **Negative Filtering** (discounting the positives): Focusing almost entirely on the negatives and dismissing the positives.

  Example: *Doing really well on an exam but only focusing on a question you missed.*

- **Overgeneralizing**: Overestimating a pattern based on insufficient evidence.

  Example: “Everyone in California drives recklessly.”

- **Perfectionism**: Unfair and very rigid demands and expectations for yourself.

  Examples: “I can’t make any mistakes” or “This presentation must go perfectly.”

- **All-or-Nothing Thinking**: Seeing situations and people in all-or-nothing extremes.

  Examples: “I am a total failure,” “I always have bad luck!,” or “No one cares about me.”
Cycle of Anxiety

Risk Factors
- Genetics
- Health Concerns
- Trauma
- Substance Misuse
- Learning: family, culture, society

Triggers
- Stress & Change, such as:
  - School, Relationships
  - Injustices, Finances

Thoughts
- Negative & Unfair
- Cognitive Distortions
- Worry Habits

Behaviors
- Avoidance
- Over-preparedness
- Reassurance-seeking
- Substance use
- Procrastination

Feelings
- Guilt
- Anxiety
- Frustration
- Sadness
- Embarrassment
- Fear

Physical Changes
- Muscle Tension
- Reduced Focus
- Rapid Heart rate
- Stomach Issues
- Sleep Issues
- Restlessness
- Fatigue
EXERCISE

Let’s Examine Our Own Cycle of Anxiety!

Which cognitive distortions were coming up for you?

What is the evidence that the automatic thought(s) is true, and what evidence is there that it is not true?

You’ve thought about the worst that can happen, but what’s the best that could happen? What’s the most realistic scenario?

How likely are the best-case and most realistic scenarios?

What would be a more adaptive thought in the future? How would this thought feel different?
THOUGHT CLOUD MEDITATION
1. Alert and awake, concentrating well
2. Mildly anxious and distressed
3. Moderately anxious and distressed
4. Quite anxious and distressed
5. Extremely anxious and distressed
ADDITIONAL RESOURCES

- **CBT apps**: Wysa, Calm, Headspace, Thought Diary, Stop Panic and Anxiety, MoodMission, Shine, Happify [https://www.anxiety.org/](https://www.anxiety.org/)
- **Counseling groups** throughout every week
- **Pioneers for HOPE** - support with food and housing @pioneersforhope
- Follow us on **Instagram** - @eastbayshcs
- **Downloadable slides and group handouts**
Think share about what skills you might want to practice from home this week:

- Body Scan
- Pay attention to my cognitive distortions
- Write out my cycle of anxiety
- Thought Cloud Meditation

It is best to practice these when you are not anxious, so that you have the routines in place when you are feeling overwhelmed.

See you next week!
